Profile

AI/ML recent graduate with a focus on building generative AI applications and scalable machine learning pipelines. Experienced in developing RAG-based systems, fine-tuning LLM workflows, and deploying intelligent backend services. Passionate about solving complex technical challenges, backed by a strong foundation in Data Structures, Algorithms, and production-level system design.

Experience

AI System Evaluation Intern, AirDawg Labs July 2026 – Present

Working as an expert contributor in creating benchmark datasets to train frontier AI agents.

AI Intern, Autom8x July 2026 – Present

Developed Operations Maintenance Agent in Oil and Gas field using Anthropic SDK in an collaborative environment

GenAI Intern, DStarix Techno July 2026 – Present

Built several GenAI projects spanning from RAG Application to LangGraph architecture solving real world problems. Built projects that are end to end covering frontend , backend and AI as a core mechanism.

Skills

- **Programming:** Python, SQL, C++,JavaScript
- **AI & Data Science** PyTorch, Scikit-learn, Pandas, NumPy, Matplotlib, Feature Engineering, Data Preprocessing
- **Backend & Databases:** FastAPI, REST APIs, API Integration, SQLite, SQLAlchemy
- **Generative AI:** LangChain, LangGraph,LangSmith, RAG Pipelines, Hugging Face, Prompt Engineering
- **Web & Tools:** HTML5,CSS,GitHub
- **Core CS:** Data Structures & Algorithms, Operating Systems, Computer Networks

Projects

AI Document Assistant Live Demo

Engineered a RAG-based document retrieval app using FastAPI and LangChain for context-aware semantic search. Implemented Hugging Face embeddings and FAISS vector storage to optimize retrieval accuracy and response latency. Designed scalable asynchronous backend APIs to streamline data ingestion workflows.

Kepler Planetary Signal Review System Live Demo

Developed a full-stack signal classification platform; achieved 89 % recall in signal detection. Automated classification workflows, reducing manual workload by 70 % via an XGBoost-backed engine. Architected secure, modular RESTful APIs with JWT authentication and deployed on Railway/Vercel.

Telco Customer Churn Prediction System GitHub

Built an end-to-end ML pipeline, from feature engineering to model evaluation and deployment. Integrated SHAP explainability to provide transparent, interpretable model insights for stakeholders.

Education

B.Tech in Artificial Intelligence & Machine Learning

Guru Tegh Bahadur Institute of Technology 2022 – 2026
CGPA: 8.98

Achievements

Solved 1500+ DSA problems across coding platforms.

Built multiple backend and AI-powered applications involving APIs, machine learning, Generative AI, and deployment workflows.
